

# Special Track on: INFORMATION ACCESS AND RETRIEVAL

At the 35th ACM/SIGAPP Symposium On Applied Computing  
Brno, Czech Republic  
March 30-April 3, 2020

sponsored by  
ACM Special Interest Group on Applied Computing (SIGAPP)

The SRC Program sponsored by  
Microsoft Research

<https://www.sigapp.org/sac/sac2020/>

For the past 35<sup>th</sup> years the ACM Symposium on Applied Computing (SAC) has been a primary and international forum for applied computer scientists, computer engineers and application developers to gather, interact and present their work. The ACM Special Interest Group on Applied Computing (SIGAPP) is the sole sponsor of SAC. The conference proceedings are published by ACM and are also available online through ACM's Digital Library.

**The Information Access and Retrieval special track is concerned with the theory, implementation and evaluation of information access technologies to novel application areas and novel contexts.**

## Important Dates

**Sept 15, 2019** Submission of regular papers and SRC research abstracts  
**Nov 10, 2019** Notification of paper acceptance/rejection  
**Nov 10, 2019** Notification of SRC acceptance/rejection  
**Nov 25, 2019** Camera-ready copies of accepted papers/SRC  
**Sept 15, 2019** Submission of regular papers and SRC research abstracts

## Track Co-Chairs & Contacts

**Gloria Bordogna**, CNR-IREA Consiglio Nazionale delle Ricerche, Institute of Electromagnetic Sensing of the Environment, via Bassini 15, 20133 Milano, Italy, email: bordogna.g@irea.cnr.it tel +39-0223699287

**Gabriella Pasi**, Università degli Studi di Milano Bicocca, Viale Sarca 336, 20126 Milano, Italy, email: pasi@disco.unimib.it tel +39-0264487847

## Special Track on Information Access and Retrieval (IAR - SAC 2019)

### **IAR Track 2020 facebook link:**

<https://www.facebook.com/profile.php?id=100006010878218>

Information Retrieval (IR) can be considered as the first historical research area aimed at defining systems for automatically accessing huge amounts of unstructured information. In the past 30 years, IR has grown well beyond its primary goals of indexing and searching textual documents in static bibliographic collections, and has moved away from the perception of being the narrow area of interest of librarians and information experts.

With the incredible expansion of the Web, the expression “big data” has become of common use to indicate huge amounts of both unstructured and structured data different as far as their formats, genre and topics, characterised by variable creation rates by sources with high or periodic frequency, and heterogeneous veracity. In this context new scalable techniques to access and manage “big data” must be defined to cope with the famous 4 Vs in order to achieve as far as possible both efficiency and effectiveness.

In the era of “big data”, a widespread diversification of information access technologies has been developed (e.g. Recommender Systems, Question Answering Systems, Geographic IRS, social information systems and services); moreover these technologies are used in many different applicative contexts.

These new technologies reflect the evolution of the research on information access and retrieval that has moved from considering the problems posed by the management of textual information such as the modelling, design, implementation and evaluation of systems that provide a fast and effective access to large amount of textual documents, to deal with the problems posed by systems managing a large amount of distributed multimedia information, heterogeneous with respect to many aspects such as formats, types, genres, authorships and quality.

The main issues of the research in this field include: providing effective means to express information needs, identifying user intents and interests, analysing the retrieved results by estimating the relevance of documents to user information needs and intentions, evaluating the sources trustfulness. These are complex tasks that depend on several factors among which the subjective and multi-dimensional nature of relevance, both user's and documents' context, and the documents' nature as well.

The definition of new models as well as their application and evaluation in standard experimental contexts are very challenging tasks that deserve a great attention by the researchers.

## Topics

This special track is concerned with the theory, implementation and evaluation of information access and retrieval technologies to novel application areas and novel contexts. This is the 17<sup>th</sup> edition of this track in the context of SAC.

We invite submission of original research contributions, and experimentations in emerging fields such as Context-based and personalized IR; crowd-sourced Information analysis and filtering; Collaborative search and filtering; User Interfaces for information access, presentation, and exploration of web results; quality assessment for Information retrieval and filtering, polarity assessment of social media contents.

The topics of interest include:

- Big data summarization and filtering
- Multimedia information indexing and retrieval
- Semantic, conceptual, ontology-based indexing and querying
- Users' modelling and personalization in IR and filtering,
- Context-based IR and filtering,
- Flexible query languages,
- Topic and event detection and tracking,
- Cross language retrieval,
- Collaborative information searching and filtering,
- (Mobile) Search engines and location-based services,
- Models of information access and retrieval,
- Emerging Applications of information access and retrieval,
- Web Recommendation search, ranking and summarization
- Polarity classification of social network contents

## Guidelines for Submission:

Original full papers and Student Research (SRC) abstracts from the above mentioned or other related areas will be considered. Submissions fall into the following categories: Original and unpublished work Reports of innovative computing applications in the arts, sciences, engineering, and business areas Reports of successful technology transfer to new problem domains Reports of industrial experience and demos of new innovative systems.

Peer groups with expertise in the track focus area will blindly review submissions to that track. Each submitted paper will be reviewed by at least three referees. Accepted papers will be published in the annual conference proceedings. Submission guidelines can be found in the download page of SAC 2020 Website <https://www.sigapp.org/sac/sac2020>.

Papers and SRC Abstracts should be submitted per track using the provided automated submission system via the website: <https://www.softconf.com/i/sac2020/>

- <https://www.softconf.com/i/sac2020> (for regular/poster paper submission)
- <https://www.softconf.com/i/sac-src2020> (for SRC abstract submission)

**Submission of the same paper and SRC Abstract to multiple tracks is not allowed.**

Submissions must follow the template reported at the conference web site.

Further information on SRC Abstracts are provided in the Call for SRC Abstracts

**The length of the paper is 6 page (included in the registration) + 2 pages (at extra charge) = 8 pages maximum.**

**The length of the poster is 3 pages (included in the registration) + 1 page (at extra charge) = 4 pages maximum.**

**SRC Abstracts can have a length of 4 pages in ACM camera ready format.**

Submissions should be printable on a standard printer on common paper formats, such as US letter and A4.

**The author(s) name(s) and address(es) must NOT appear** in the body of the paper, and self reference should be in the third person. This is to guarantee impartiality of the blind review.

**Notice that not blind Full Papers will not be sent to the reviews and will be rejected.**

**Paper registration is required, allowing the inclusion of the paper/poster in the conference proceedings. An author or a proxy attending ACM SAC MUST present the paper: This is a requirement for the paper/poster to be included in the ACM/IEEE digital library. No-show of scheduled papers and posters will result in excluding them from the ACM/IEEE digital library.**
